

Promisec Releases Major Upgrade with Clientless Inventory Module for INNERspace

New York, NY – March 17, 2010: Promisec Inc. today released a major upgrade to its enterprise-class Clientless Endpoint Management software, Promisec INNERspace version 4.20. The version includes an all-new Inventory module. Using patented clientless technology, INNERspace is able to investigate and correlate software and hardware data in less than five seconds per machine. The solution works without a client installed on the endpoints or servers. INNERspace provides comprehensive inventory reports within a few hours for most organizations, while competing solutions can take days or weeks.

Inventory has become a strategic need for CIOs in order to make educated decisions regarding purchasing, upgrades and IT changes. Complete, 100% accurate data is a crucial element to make cost-saving and business-critical decisions for enterprises and organizations. Promisec provides corporate Information Security and Technology departments with inventory and visibility with an unprecedented level of accuracy.

“Accurate inventory data translates to cost savings. It’s as simple as that,” said Hilik Kotler, Promisec EVP Business Development and Co-Founder. “Knowing what assets you have allows you to take appropriate actions. Agent-based and WMI inventory solutions are resource intensive, impacting the network and overloading the PC. Promisec’s lightweight clientless technology delivers fast and accurate inventory within minutes or hours. Companies can make decisions quickly, based on a complete data set.”

Promisec’s Inventory Module includes:

- Rapid and dynamic 24*7 inventory monitoring with virtually no impact on the endpoints or the network
- Software compliance
- License decision-making support
- Checks and balances
- Hardware inventory
- Software inventory

In addition to the Inventory Module, Promisec INNERspace Version 4.20 includes:

- Improvements in reports
- New black list categories in the security module
- Addition of a single inspection option for compliance (rather than periodic inspections)
- Dashboard improvements (additional layouts, report generation)

- New and enhanced Power management module with “wake up” technology, replacing WoL technology

About Promisec

Promisec, Inc. delivers Clientless Endpoint Management (CEM) software solutions that eliminate threats and optimize corporate internal networks with unprecedented visibility and control over the endpoints. Promisec’s patented technology allows IT managers to identify and resolve security, compliance and policy issues in a matter of minutes, without making any changes to the network or endpoints.

Founded in 2004 by former military intelligence experts, Promisec's management team brings broad high-level executive experience in the network security industry.

Promisec is a privately held company with headquarters in Israel and offices in New York, Tokyo and Paris. Our customers include Forbes Global 2000 companies and other organizations in the manufacturing and service industries as well as government and health care institutions.
