

PROMISEC
Securing The Internal Network

PROMISEC SPECTATOR®

Gain Visibility, Control and Validation for Your Internal Network

Even in today's highly sophisticated corporate networks, IT Administrators, CIOs and CISOs often have limited or no real-time visibility to what is installed and running on their network endpoints and servers. Without visibility, policies are breached, compliance fails and security is compromised, resulting in loss of productivity, business continuity and ultimately lost revenue.

Promisec Spectator® offers the first clientless endpoint management solution to address a broad scope of internal threats with no invasive client software installation.

Endpoint Visibility: See What You've Been Missing

With Promisec Spectator, unauthorized user activity, technical errors during installations, disabled software clients and other hidden issues are quickly identified and resolved. Spectator is designed to provide you with a complete and accurate picture of your organization's infrastructure and its entire endpoint landscape.

Control & Optimize Your Laptops, Desktops and Servers

Promisec Spectator complements your existing security and IT controls, functioning as an umbrella over your infrastructure, proactively identifying risks 24/7 to your business that previously were difficult or impossible to view. Without false positives and installing an agent on your endpoints, Spectator has the ability to ensure:

- ▶ Anti-virus is working properly throughout your entire infrastructure
- ▶ Patch Management is performing well and is reaching all endpoints
- ▶ Encryption agents are installed and running in the right places
- ▶ Group Policy (GPO) definitions are aligned with your expectations

- ▶ Inventory and package solutions are deployed and doing their jobs properly
- ▶ Any other 3rd party solution you might have in your infrastructure is operational

Rapid Deployment Plus Real-Time Monitoring and Alerting

With Promisec Spectator, installation is quick, monitoring begins immediately, and initial reports are provided within hours of installation. Using "Sentries" that act as local management stations, Spectator monitors an unlimited number of remote sites. Monitoring and alerting criteria and corporate baselines are defined by you at a central management server. Endpoint status reports are delivered in minutes, and remediation is executed remotely and often, automatically. With Spectator, your globally distributed offices suddenly don't seem so far away.

"Promisec Spectator gives us comprehensive visibility into endpoint activity and greater control over our network. Its clientless approach makes deployment quick and easy."

Derek Farlow,
ICT Security Manager,
King's College Hospital

You Define Policies. We Ensure Compliance.

When deviations from your defined policies are identified, Spectator provides multiple options: notification, reporting, automatic and/or manual "right click" remediation based on your defined business needs. Our remediation capabilities increase ROI by proactively resolving many common issues before they are a problem, eliminating the need for Help Desk and technical staff to physically facilitate remediation requirements.

Addressing the Full Spectrum of Internal Threats

Promisec Spectator addresses a broad scope of internal threats including:

- ▶ Disabled security clients
- ▶ Unauthorized applications, misconfigured services, unwanted processes
- ▶ Unauthorized mobile storage & other potentially dangerous devices
- ▶ Unauthorized connectivity to the Internet
- ▶ SW compliance issues
- ▶ Deviation from regulations
- ▶ Suspicious start-up commands
- ▶ Changes to the normal authorized operation of PCs and servers

About Promisec®

Promisec, Inc. provides clientless endpoint management (CEM) software solutions that give corporate IT administrators unprecedented visibility, speed and control over internal network endpoints, in-depth real-time intelligence to identify threats, and the tools to neutralize them. The company's products, Promisec Spectator® and Promisec Spectator™, are used by a wide range of SMBs and Global 2000 organizations. With 24/7 or on-demand clientless monitoring, compliance and remediation, Promisec protects against business disruption caused by internal network threats while optimizing IT operations and enabling organizations to confidently place trust in their most important assets - their people. Founded in 2004, Promisec's headquarters are located in Israel with offices in New York and Paris.

Main Features & Benefits

- ▶ Secure tactical endpoint management application
- ▶ Comprehensive visibility and control
- ▶ Corporate & regulatory compliance enforcement
- ▶ Deployment in minutes
- ▶ Fast Inspections: 4-8 seconds/PC
- ▶ Monitoring & Remediation
- ▶ User-defined customization
- ▶ Simple integration with existing systems
- ▶ Multiple, simultaneous inspections
- ▶ Fast ROI

Spectator – A Better Choice

Spectator is simply faster, more accurate and gives you greater visibility and more reliable access to your entire internal network than any client-based solution with no burden on network resources. Promisec Spectator is truly clientless, with no ActiveX control or any other type of dissolvable agent vulnerable to violations/threats by benign users or hackers.

If you can manage your internal network without a client, why waste the significant time, energy and money it takes with a client?

2009 Red Herring 100 Award Winner, honoring Promisec as "one of the top 100 most promising tech companies."
